Dumps4u

Vendor: Microsoft

Exam Code: AZ-103

Exam Name: Microsoft Azure Administrator

Version: DEMO

More Information: <https://www.dumps4u.com/az-103-dumps/>

Product Questions

Version: 6.0

Mix Questions

Question: 1

<https://www.dumps4u.com/>

You have an Azure subscription that contains 10 virtual machines. You need to ensure that you receive an email message when any virtual machines are powered off, restarted, or deallocated. What is the minimum number of rules and action groups that you require?

- A. three rules and three action groups
- B. one rule and one action group
- C. three rules and one action group
- D. one rule and three action groups

Answer: C

Explanation: An action group is a collection of notification preferences defined by the user. Azure Monitor and Service Health alerts are configured to use a specific action group when the alert is triggered. Various alerts may use the same action group or different action groups depending on the user's requirements. [Reference: https://docs.microsoft.com/en-us/azure/monitoring-and-diagnostics/azure-monitor-actions](https://docs.microsoft.com/en-us/azure/monitoring-and-diagnostics/azure-monitor-actions)

Question 2

You have an Azure subscription that contains two resource groups named RG1 and RG2. RG2 does not contain any resources. RG1 contains the resources in the following table.

Name	Type	Description	Lock
VNet1	Virtual network	A virtual network	ReadOnly
VNet2	Virtual network	A classic virtual network	None
VM1	Virtual machine	A virtual machine that runs Windows 10 and is stopped and attached only to VNet1	Delete
VM1_Disk1	Disk	A managed OS disk that is attached to VM1	None

Which resource can you move to RG2?

- A. VM1_Disk1
- B. VNet1
- C. VM1
- D. VM2

Answer: B

Explanation: When moving a virtual network, you must also move its dependent resources. For example, you must move gateways with the virtual network. VM1 and VM1_Disk1, which is in VNet1, is not a dependent resource. **Incorrect Answers:**
 A: Managed disks don't support move.
 C: Virtual networks (classic) can't be moved.
 D: Virtual machines with the managed disks cannot be moved. [Reference: https://docs.microsoft.com/en-us/azure/azure-resource-manager/move-within-resources/move-rosses](https://docs.microsoft.com/en-us/azure/azure-resource-manager/move-within-resources/move-rosses)

<https://www.dumpstia.com/>

Actions

- On the peering connection in VNet2, allow gateway transit.
- On the peering connection in VNet1, allow gateway transit.
- Create a new virtual network named VNet1.
- Recreate peering between VNet1 and VNet2.
- Add the 10.33.0.0/16 address space to VNet1.
- Remove peering between VNet1 and VNet2.
- Remove VNet1.
